## **Trailblazers in Separation Technology to Join Forces**

### **WGM SISTEMAS (Brazil) & EURODIA Industrie (France) announce New Partnership**

**WGM Sistemas – a specialist in membrane filtration technology– and EURODIA Industrie – a world leader in membrane processes and IEX resins systems in the food industry – are partnering to offer a wide range of separation solutions.**

Since 2011, WGM Sistemas, a key supplier of membrane processes in the food and bio industries, has been working with EURODIA Industrie SA, an expert in food, fruit juice and wine treatment. After several successful collaborations in highly-technical projects, both companies recognized the potential for a wide range of complementary services and market synergies. These opportunities have prompted their management to join forces and offer full turn-key solution packages to the food and bio-industries.

“This partnership will accelerate process development for our current and future clients, by providing the highest-quality solutions to meet their needs. Not only will they save time, but they will also benefit from the knowhow of two industry leaders, known for their expertise and superior customer service,” says Bernard Gillery, CEO of EURODIA.

Wilton Marin, director of WGM Sistemas, adds: “This new partnership will strengthen our market presence, placing the joint WGM / EURODIA organization at a prime position to offer the most up-to-date solutions in membrane treatment technology. We already have projects underway in Brazil. This partnership will also provide great opportunities for our teams to meet new challenges and develop their expertise.”
